

API INTEGRATION

Seamless Integration. Real-Time Control. Zero Friction.

Parker Technology's API integration with HUB Parking Technology connects ticketing, permit, and gate data directly into the Parker Technology workflow.

Customer service representatives gain immediate visibility and control, resolving issues in real-time while assisting motorists at the device.

No system switching. No manual searches.

CSRs work from a single interface, accessing live HUB data and taking action instantly to keep traffic moving and operations running smoothly.

Monthly Parker Management

- Search monthly parkers
- View permit details
- See permit usage & activity
- Reset motorist in/out status

Ticket Management

- Search by ticket number
- Search by license plate
- Search by last 4 digits of credit card
- Create lost tickets
- Issue new tickets using entry time

Gate & Device Actions

- Remotely open gates
- Push existing tickets to devices

Real Results. Right Away.

Faster Issue Resolution

Resolve motorist issues in real-time without leaving the workflow

Greater Visibility

Access complete parking activity and history instantly

Stronger Revenue Protection

Ensure accurate ticketing and permit enforcement

More Efficient Workflows

Eliminate system switching and reduce manual effort
